

Lightyear®

An Application Framework for Talent Management That Acts as a Central Feedback Center for all Organizational Functions!

Overview

Anyone who has ever worked in a corporate environment or any type of large organization for that matter, has experienced the frustration of trying to coordinate prioritized tasks as well as having to work off multiple application screens to accomplish day to day tasks. Lightyear is an automated environment that acts as a central feedback center for all of an organization's systems and resources. This central feedback center, provides information in a logical, prioritized, to-do-list fashion that optimizes the end-users ability to accomplish his/her business responsibilities, and achieve performance breakthroughs on a personal and corporate level.

Lightyear was designed to be flexible enough to encompass all of the processes and systems within an organization and automate them to a more efficient and dynamic means.

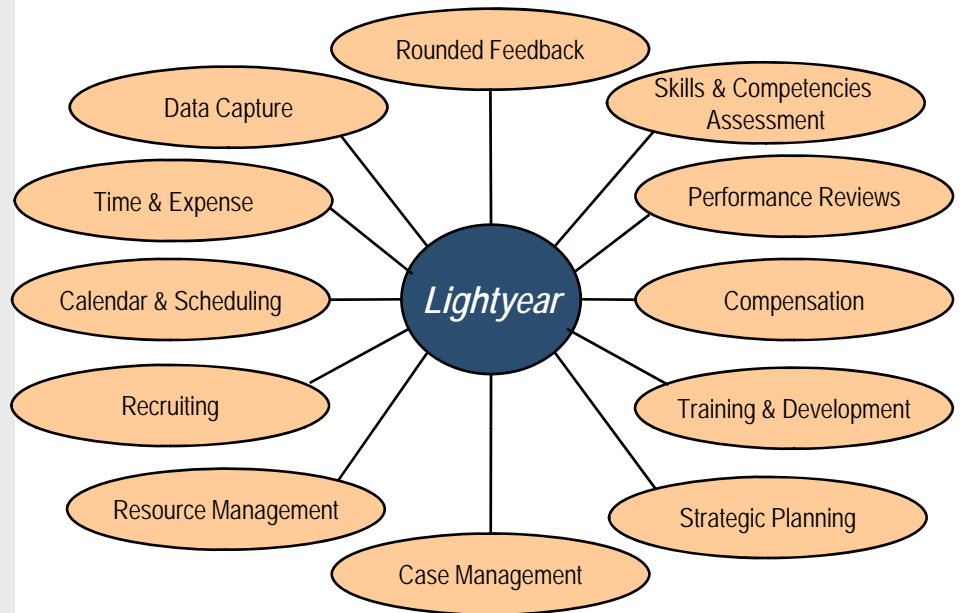

What makes Lightyear unique, is it's ability to involve and coordinate all of the systems in your organization via a central location. In addition, Lightyear is constructed in a fundamentally correct fashion so it allows you to implement one process at a time without changing the essence of the base applications.

Management's Perspective

For corporate management, Lightyear provides information critical to making correct strategic and operational decisions relating to the structure, development, cost effectiveness, and productivity of the workforce. It also provides a central knowledge database that be accessed to measure and evaluate the organizational skill set.

Employee Perspective

In today's environment, the employee has become desensitized to the amount of information and work flow steps required to accomplish the simplest of tasks. Lightyear is designed to understand an end user's profile and present each user with information in a logical to-do-list.

Our expertise is available just as long as you need it, in order to accelerate project development and ensure that your project gets completed with the best technology, on time and on budget.

Methodology

The entire project life cycle, including Analysis and Design, Rapid Prototyping, Application, Specification, Implementation, and Quality Assurance is performed by Softscape staff. Using the latest technologies, we can satisfy your software development needs quickly and efficiently. We plan and implement your pilot programs, including architecture, prototype development and proof of concept demonstrations.

Software Development

Softscape licenses and develops customized commercial software applications for Fortune 1000 companies. Softscape can plan, develop, implement, maintain and conduct your product trial and evaluation, provide market and technology studies, perform competitive analysis and provide white papers. Softscape provides software integration and application development, software migration and conversion, and software enhancements.

Our development methodology and practices are derived from our combined years of experience at major engineering corporations and big six consulting firms. This methodology includes project planning and management, requirements analysis, functional and design specifications, high level software design, quality assurance test plans, rapid application development, system prototyping, component based development and system maintenance.

About Softscape

Softscape, Incorporated is a world class software product development company specializing in qualitative information management technologies and applications. Softscape's professionals have a proven industry track record in solution frameworks for enhancing a corporation's long term competitive edge while balancing short term tactical needs.

Softscape is located in Wayland Massachusetts and can be reached at (508) 358-1072 or fax (508) 358-3072, email info@softscape.com or send mail to us at 30 Boston Post Road, Wayland, MA 01778.
